

# Depression and Anxiety Medicine Study

Researchers at Children's Mercy are conducting a research study for children and teens taking medicine for depression and/or anxiety. We want to learn how to find the "just right" dose for children and teens prescribed these medicines.

We would like to invite you to participate!

**Would this study be a good fit for me?**

This study might be a good fit if you are:

- Between ages 6-18
- Prescribed fluoxetine (Prozac®), sertraline (Zoloft®), or escitalopram (Lexapro®)

**What would happen if I took part in the study?**

The study lasts about 2 weeks and involves:

- Taking your medicine everyday for 2 weeks without missing any doses
- One 24-hour visit that includes:
  - Blood draws from an IV
  - Filling out surveys

Participants will be compensated up to \$250 for their time.

**Interested in learning more?**

Fill out this interest form:
